PEACE/WAR ISSUES FROM A PSYCHOLOGICAL PERSPECTIVE

A Selective Bibliography

Editor:
Åke Bjerstedt

It is reasonable that you can be more effective and efficient as a peace educator, if you have a good knowledge of typical conceptions and other psychological prerequisites among the school pupils or other groups you want to educate or influence. In addition, psychological components are important in most conflict and war situations.

In this list examples of publications containing studies or discussion related to psychological aspects of war, peace etc. and of peace education are given. In the 80s many studies dealt with reactions to the nuclear war threat. – The major focus is on materials in English from recent years, with some examples added from other language areas. A few basic publications have been marked with an asterisk (*).
